

# How to use a Stiltz PDF when presenting to a customer

We recommend using the free Adobe Acrobat Reader app to display Stiltz PDFs to customers. Download the app here:

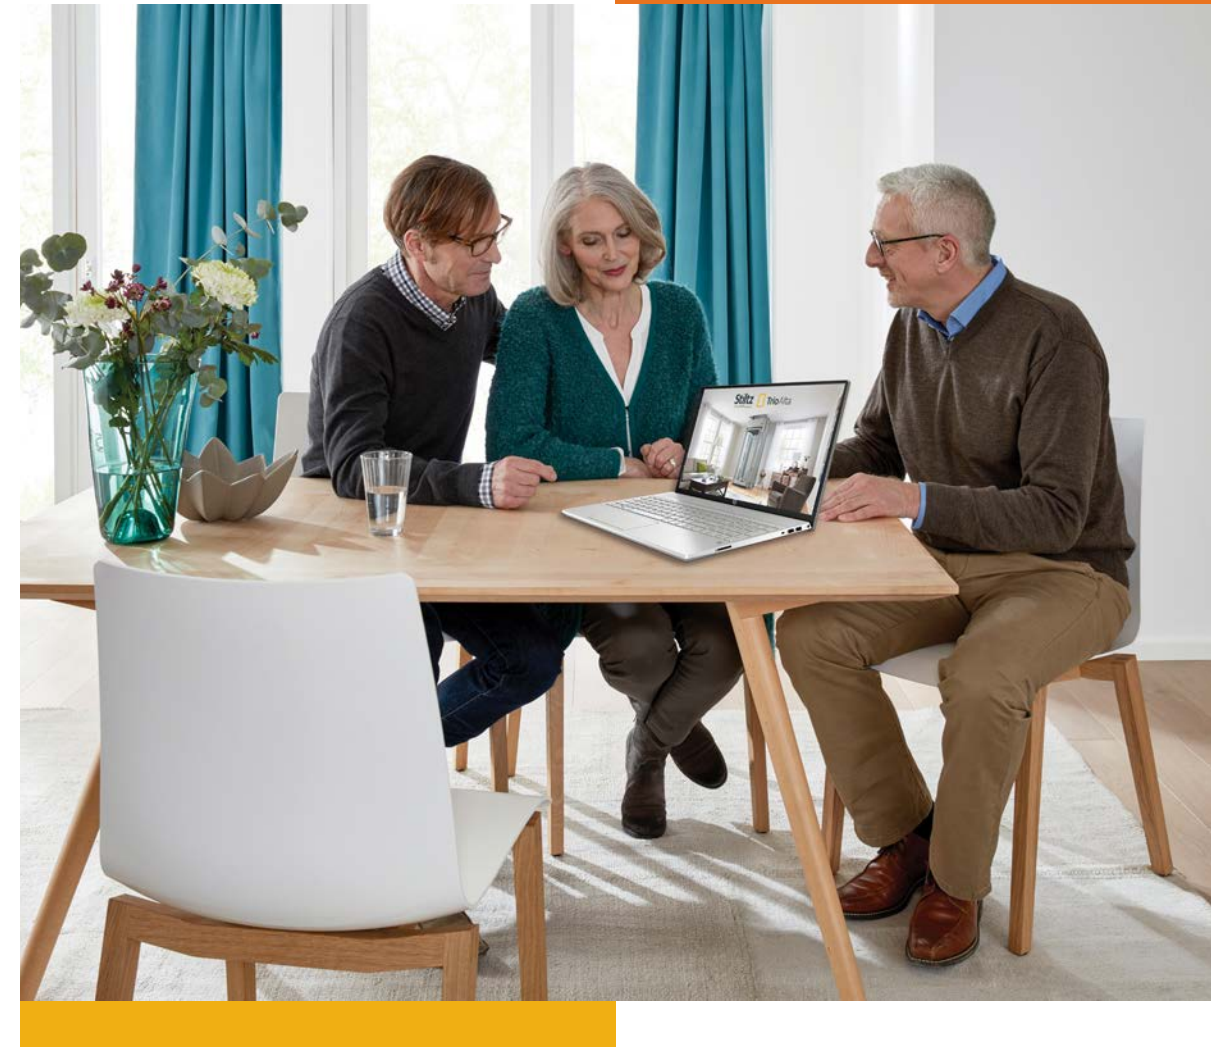

<https://get.adobe.com/reader/>

1. After opening the PDF in Acrobat Reader, put the PDF into **“Full Screen Mode.”** To do this, with the PDF open, press:

 **Ctrl** **L** (Windows)

 **L** (Mac)

2. While in Full Screen Mode, use the Up/Down Arrow Keys to navigate through the PDF.
3. To exit Full Screen Mode, type the same keys, or use 

**Stiltz**<sup>TM</sup>  
The **homelift** company

 **Trio Alta**

## SPACIOUS & LUXURIOUS

The Stiltz Trio Alta will comfortably fit two to three people or even a full-sized wheelchair with a helper. To reduce floor space, the rails are neatly recessed behind the entrance and exit, which are wider.

## SMALL FOOTPRINT

Stiltz Homelifts have the smallest footprint of any home elevator. You can tuck it out of the way – or put it front and center for all to see. It's your choice!

## HALF DOOR OPTION

The half-door option provides a more open feeling to the cab. It comes with a safety "light curtain" that instantly halts the lift whenever the plane of the door is crossed.

## FULL DOOR OPTION

The full-door option, which may be required by local building codes, still provides an open feeling, with full visibility into the rooms outside.

## FITS 2, 3 OR WHEELCHAIR

The Trio can carry up to 3 people at a time or 1 person in a walker or wheelchair (with room for a helper). It's also great for laundry, groceries – even the family pet!

## THRU-CAR OPTION

The Trio is available with a thru-car option. That means both the front and the rear of the lift car can be used for entry or exit.

## UNIQUE RAIL SYSTEM

The Stiltz rail system takes all the weight of the lift. That means no structural walls are required for installation. Your lift can be installed in locations where other home elevators simply can't fit.

## QUIET OPERATION

The self-contained electric motor is hidden away in the roof of the cab. That makes the lift extremely quiet when in motion. You won't find any noisy hydraulics in a Stiltz Homelift.

## LOW ENERGY USAGE

Stiltz Homelifts use relatively little power during operation — about as much as a dishwasher. Our lifts run on a standard 220 circuit, or on a 110 circuit with the addition of a step-up transformer that is hidden in the roof of the car.

## CONTROL PANEL

The in-car control panel is designed to be extremely easy to use, with simple push-button "hold to run" controls.

## TWO REMOTE CONTROLS

Every Stiltz Homelift comes with two remote controls. That means you can easily call or send the lift between different floors.

## BATTERY BACKUP

Did your power go out? No worries!  
All Stiltz Homelifts feature a battery  
backup that will safely return the  
lift to the lower level in the event of  
power loss to the home.

## SAFETY BRAKING

In the highly unlikely event of a cable failure, automatic safety brakes will instantly engage, stopping the lift immediately.

## BLOCKAGE SENSORS

Your Stiltz Homelift will stop automatically if it encounters an obstruction either below or above while travelling.

## SAFETY DOOR LOCK

The safety lock means that your lift door will open only after it has completely finished its journey.

## SECURE KEY OPERATION

Every Stiltz lift comes with a key that turns the lift on and off. Without a key, no one – such as small children – can operate the lift without your permission.

## IN-CAR TELEPHONE

Stiltz Homelifts come with the option to include a wired telephone line or a cell phone. The phone has its own special nook inside the cab for easy access while riding the lift.
